Accmar completes **Dubai Club** project

*Accmar pedestals at
DIMC.*

In sharp contrast to delivery of large utility pedestals to an operator in ice-bound Alaska a year ago, US power pedestal manufacturer Accmar Equipment continues to prove that its units are equally durable in extreme heat by winning its third and most prestigious contract in the Middle East.

"We won such diverse contracts because of the inherent strength of our pedestal," explained Accmar president, Juan Pizarro, who is particularly delighted that his company – probably the smallest in the global field of marina power pedestals – secured a significant contract to install pedestals at Dubai International Marine Club (DIMC) in the UAE.

The DIMC project, completed last October, involved the supply of 14 Megayacht pedestals, fire cabinets and water pedestals

for a new superyacht extension built by Majestic Jetties. The pedestals are of white powder coated aluminium construction and range from 100 Amp three-phase to a 400 Amp units.

DIMC, the first marina to be built in Dubai, forms the hub of the annual Dubai International Boat Show and the pedestals were in use for the 2013 event (5th-9th March).

Accmar pedestals, UL listed and built to the highest standards to ensure long life, are now also part of

the product portfolio marketed by newly formed Florida-based company Best Marine Solutions (see p.58).

Juan Pizarro sees the partnership as providing an ideal vehicle for educating US marina owners and operators about Accmar dock products. "By partnering with BMS, Accmar Equipment ensures the marinas just learning about our products, will have the opportunity to evaluate and compare Accmar's products, pricing and quality

against the typical menu of marina dock products," he said. "Increased competition in the marina power pedestal market should be welcomed," he added.
